

Abdulazeez Alagele

Full-Stack Engineer — Backend & Frontend

Istanbul, Türkiye • +90 551 076 2104 • drydb3483@gmail.com • abdulazeezdoman.tech • github.com/azoz20032021 • linkedin.com/in/abdul-aziz-874455225

PROFILE

Full-stack engineer who ships systems people depend on daily. Designed and delivered a school ERP now in production use by 300+ students, teachers, parents and office staff — end to end, from the data model and a 116-endpoint API to five role-specific interfaces in Arabic and English. Comfortable reverse-engineering undocumented systems and making deliberate trade-offs about running cost, failure behaviour and privacy.

EXPERIENCE

Full-Stack Engineer — Al-Ma'ali Private Secondary School

Contract · 2026

School ERP in daily production use — 300+ students, teachers, parents and office staff · [Live demo: abdulazeezdoman.tech](https://abdulazeezdoman.tech)

- Built a five-role system end to end: **116 REST endpoints** over 22 Firestore collections, 25 React screens, ~23k lines of TypeScript and **123 tests** in CI.
- Cut database cost on a read-metered store:** denormalised per-student fee totals, server-side count aggregations instead of document reads, a TTL cache with prefix invalidation, and a notification badge polling one integer rather than a list — **~60× fewer reads** on the highest-traffic poll alone.
- Shipped **in-browser face recognition** for the entrance tablet: 128-dimension descriptors computed client-side, **no image ever stored**, and a tighter-than-default threshold plus a runner-up margin check that refuses ambiguous matches between siblings. Kept its 7 MB of models out of the service-worker precache, so only the door tablet downloads them and every student's phone stays under 900 KB.
- Made paginated queries survive missing composite indexes via an offset-cursor fallback, turning a hard failure into a slower path.
- Permission checks cost **zero database reads** — role and dependants travel in a signed session token; script hashing with per-account rate limiting.
- Full Arabic **RTL** and English (900+ translation keys), offline-capable PWA, deployed to Firebase Functions and Vercel from a single codebase.

Backend Engineer

Freelance

- Reverse-engineered an undocumented production MySQL database and built a secure REST API layer over it.
- Reduced query latency by **40%** through schema and index optimisation.
- Built a webhook delivery system with **HMAC signatures and idempotency keys** for safe retries.

SELECTED PROJECTS

School ERP — interactive demo

abdulazeezdoman.tech

The production frontend running entirely in the browser — no backend, no database. Four one-click roles, no credentials to type. Source: github.com/azoz20032021/SchoolDemo

LetMessage — real-time chat platform

letmessege-client.vercel.app

React · TypeScript · Node.js · Socket.IO · MongoDB · Docker · demo: demo@test.com / 123456

- WebSocket messaging with typing indicators, multi-device presence, read receipts and direct + group rooms; messages render optimistically and reconcile against the server acknowledgement.
- Derived unread counts from a **per-member read cursor** rather than an incrementing counter, keeping badges correct across devices even when a realtime event drops.
- 62 Jest tests** over the realtime layer with live Socket.IO clients against an in-memory MongoDB; CI on GitHub Actions. Shipped in English, Arabic (full RTL) and Turkish.

Cineluxe — movie platform

cine-luxe.vercel.app

High-performance React SPA integrating an external API over large trending and top-rated datasets

TECHNICAL SKILLS

Frontend	React · TypeScript · React Native (iOS/Android) · Tailwind CSS · i18n / RTL · PWA & Workbox
Backend	Node.js (Express, Fastify) · Socket.IO · REST APIs · Webhooks · JWT · Rate limiting
Databases	MySQL (schema & index optimisation) · PostgreSQL · MongoDB · Firebase / Firestore
Real-time	WebSockets · Server-Sent Events · Presence & pub/sub patterns
Testing	Jest · Supertest · node:test · Integration & realtime testing · CI on GitHub Actions
DevOps	Docker · Git · CI/CD · Vercel · Firebase Functions · Render · Windows Server / IIS · OpenAPI
Languages	JavaScript (ES6+) · TypeScript · Python · Java · SQL · C

EDUCATION

BSc Software Engineering

2026

Altinbas University, Istanbul

Database Management · Algorithms · Computer Networks · Software Architecture

LANGUAGES

Arabic — Native

English — Professional

Turkish — Professional
